Backup from Database

Step 1: Select the Data Source

1. Select version that you want to backup.

2. Click Browse button to select a source file.

Step 2: Choose the data Content you want to backup:

1. Click checkbox to select content :

The screenshot shows the 'Backup Wizard' window with the 'Data Content' step selected. The window has a 'Backup' tab and a 'Restore' button. The 'Data Content' section is highlighted with a red box, showing two checkboxes: 'Configuration Setting' (checked) and 'Log Data' (unchecked). The 'Data Source' section shows 'Version: 1.30.06' and 'File Location: C:\Program Files\Backup Wizard\ControlC' with a 'Browse...' button. The 'Backup To...' section shows 'Folder: c:\'. The 'Execute Backup' section has a 'Backup' button.

Backup Restore

Backup

Step4:

Step 4: Click Backup Button to backup file:

Step 5: Backup Successfully:

Restore to Database

Step 1: Click label to switch to restore function

The screenshot shows a software interface with a 'Backup' and 'Restore' tab. The 'Restore' tab is selected and highlighted with a red box. Below the tabs, the 'Restore' section is visible. It contains four steps:

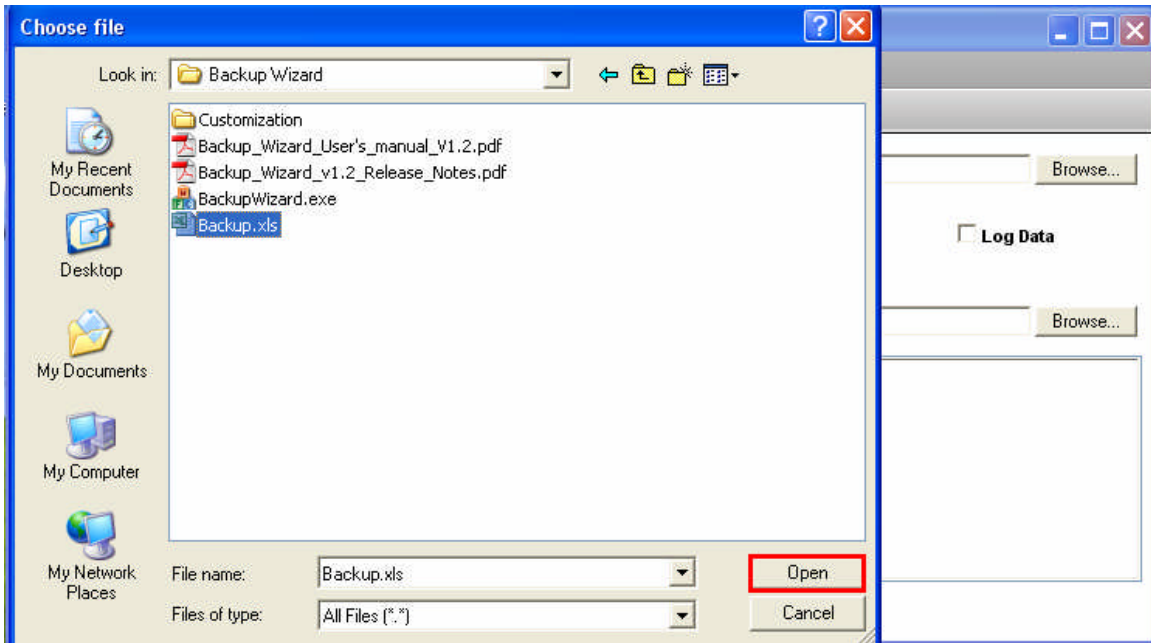

- Step 1: Data Source**: Please pick the location of "backup.xls". The 'File Location:' field is empty, and the 'Browse...' button is visible.
- Step 2: Data Content**: Please choose the data Content you want to backup. There are two checkboxes: 'Configuration Setting' (checked) and 'Log Data' (unchecked).
- Step 3: Restore To...**: Please choose the data format you want to restore. The 'Version:' dropdown is set to '1.30.06'. The 'File Location:' field is empty, and the 'Browse...' button is visible.
- Step 4: Execute Restore**: Click "Restore" button to execute restore. A large empty rectangular area is provided for the restore process.

Step 2: Choose the data Source you want to restore:

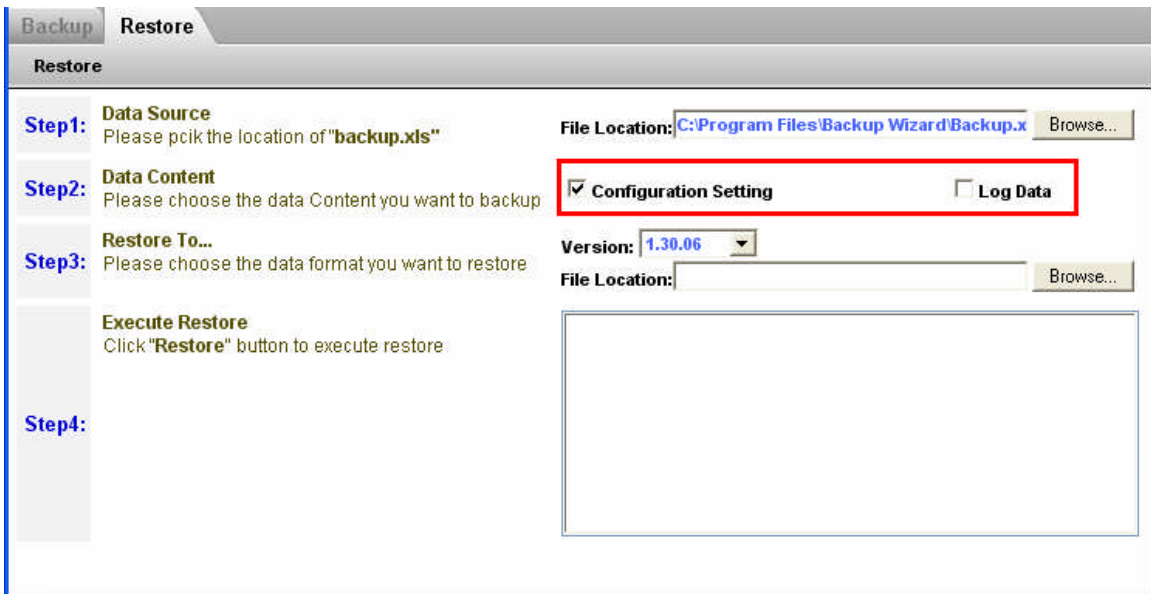

1. Click browse button to select file.

The screenshot shows the same software interface as the previous one, but with the 'File Location:' field for Step 1 highlighted with a red box. The 'Browse...' button is also visible next to it.

2. Click Open button to open file

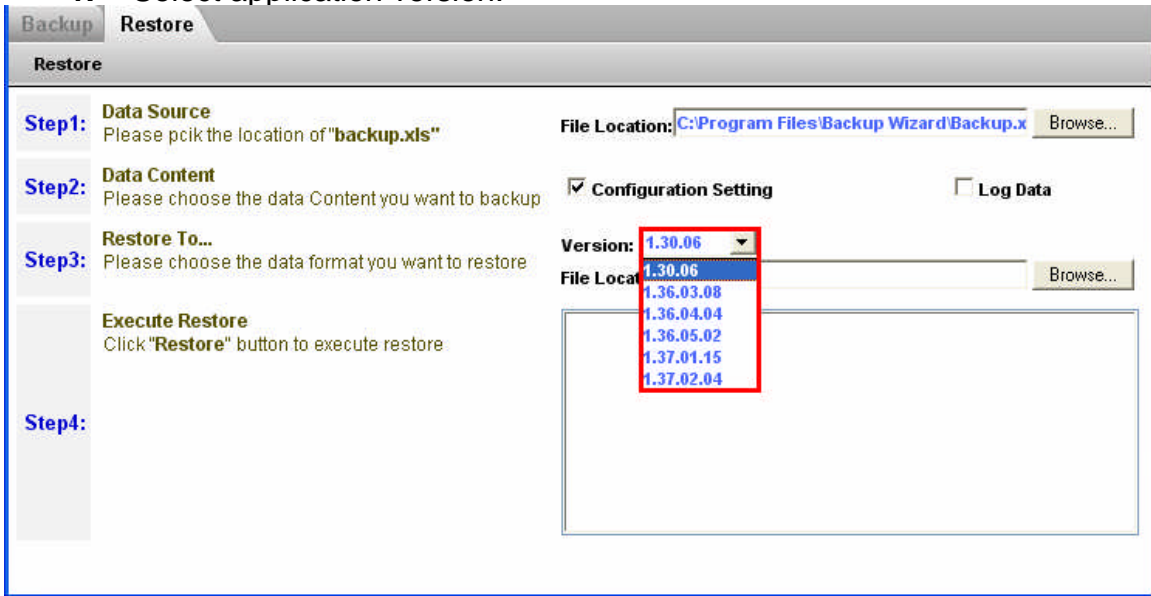

Step 3: Choose the data Content you want to restore:

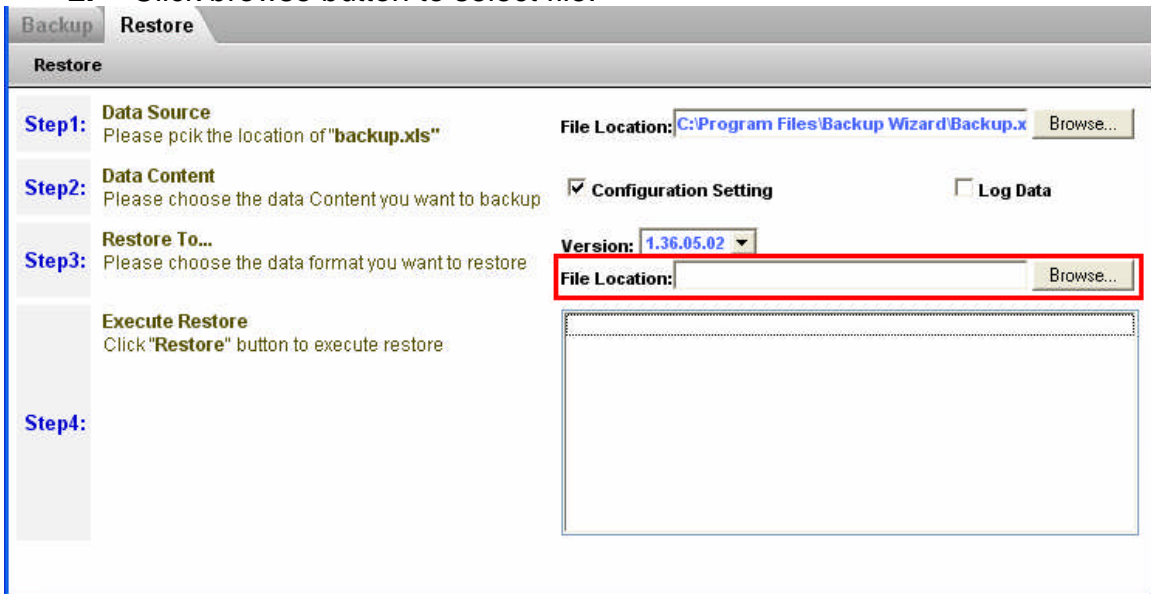

Step 4: Choose Restore to target:

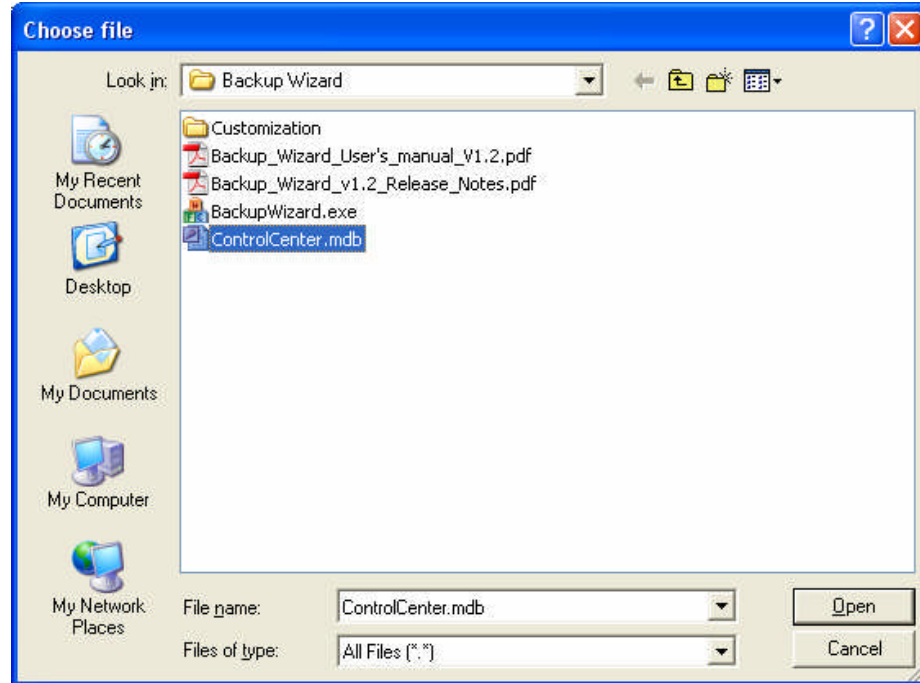

1. Select application version.

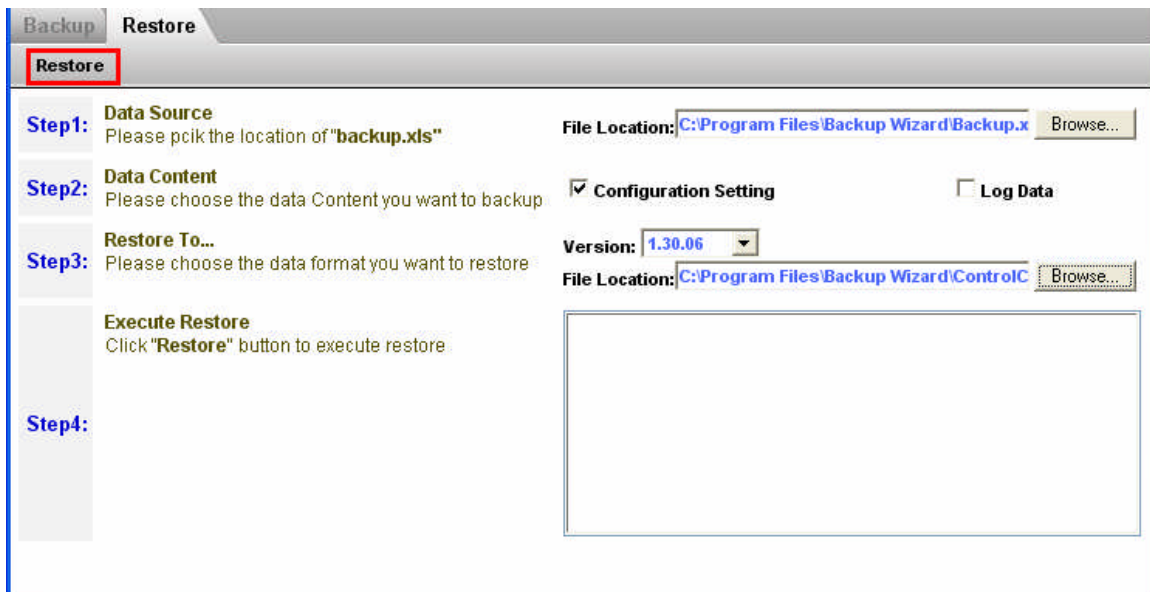

2. Click browse button to select file.

3. Click open button to open file.

4. Click restore button.

Step 5: Restore successfully:

Backup | **Restore**

Restore

Step1: Data Source
Please pick the location of "backup.xls" **File Location:**

Step2: Data Content
Please choose the data Content you want to backup **Configuration Setting** **Log Data**

Step3: Restore To...
Please choose the data format you want to restore **Version:**

Execute Restore
Click "Restore" button to execute restore

Step4:
