Firmware update

In the **System Setting** of Configuration, Choose **Firmware update**.

Select the path of firmware (for example 6.01.bin) and press the **Upload** icon.

The screenshot displays a web-based interface for a DVR control panel. On the left, a vertical navigation menu is shown with the following items: Image Adjust, Operation Mode, Image Capture, Configuration (highlighted in blue), View Log, System Setting, User Management, Network Setting, Dynamic DNS, and Alarm and Motion Detection. At the bottom of the menu is the label 'DVR Control Panel'. The main content area on the right is titled 'Firmware Update' with the URL 'http://192.168.1.16:16'. Below the title, there is a form with the label 'Select software:' followed by a text input field. To the right of the input field are two buttons: '瀏覽...' (Browse) and 'Upload'. A red rectangular box highlights the 'Firmware Update' section, and a red arrow points from the text on the left to the 'Configuration' menu item.
